

CT

Performs computerized axial tomographic scanning of head and/or body. Assures that sterile supplies, contrast materials, and other required supplies are present and laid out. May prepare and administer intravenous injections of contrast material under the supervision of the physician. Receives patients, explains methods of procedure, positions patient and makes exposures necessary for the requested examination. Independently makes standard examinations. Confers with radiologists to establish requirements of nonstandard examinations and determines technical factors, positioning, number and thickness cut of scans, etc. to satisfy the requirements. Monitors equipment and the patient during the examination to assess any changes to the patient's condition. Advises radiologist or referring physician of results of examination. Notifies them of significant scans requiring their immediate attention and visualization while patient is undergoing examination. In addition to receiving client feedback from DiagnosTemps, performance evaluations will be performed on a biannual basis.

Qualifications

- High School Diploma
- Graduate of an accredited school of Radiology
- ARRT registered, CT registry preferred
- Must be licensed in the State assigned.
- Minimum one year experience.
- CPR certified
